

ETROD

Extractivism and Transition Research Online Dialogues

*Every second Monday, from September 2020 to February 2021
4 p.m.-6 p.m. CEST*

2nd Monday, September 14th

Jamie Cross

University of Edinburgh

**Life After Chemistry or A Carbon
Anthropology**

2nd Monday, December 14th

Christina Schwenkel

University of California

**The Current Never Stops:
Intimacies of Energy
Infrastructure in Vietnam**

2nd Monday, October 12th

Gisa Weszkalnys

**The London School of Economics
and Political Science**

**A Doubtful Hope: Resource Affect
in a Future Oil Economy**

2nd Monday, January 11th

Per Högselius

**KTH Royal Institute of Technology
Resource Transnationalism**

2nd Monday, November 9th

Jaume Franquesa

University at Buffalo

Resources: Nature, Value and Time

2nd Monday, February 8th

Dominic Boyer

Rice University

**Infrastructure, Potential Energy,
Revolution**

Extractivism and Transition Research Online Dialogues

Energy, resources and their infrastructures are essential targets for reshaping societies in a time of crisis – the climate crisis the world is still facing while disaster management and media attention has turned to the Covid19 pandemic. The need to reconfigure extractivism does not become less urgent now, quite on the contrary: News of local air or water improvement – due to terminated traffic and mobility – can temporarily cover the slowdown of transitions due to emergency acts, likely recession or capacity crunch. Activists look for new ways to voice protest; they turn to the internet, banners and symbolic stand-in forms. When the Covid19 pandemic severely disrupts political participation and economic conditions, the road to post-carbon futures seems to get even longer and more winding.

The pandemic affects also the way we academics move forward. We planned several workshops and conferences in 2020 to bring together social science scholars to discuss, exchange and further develop research particularly on transition to post-carbon futures, resources, energy, infrastructures and extractivism, but had to postpone these to (hopefully) early and mid-2021. However, we are also still around and eager to continue the encounters and discussions started. To use the momentum created and the developing habitus of meeting online, we decided to organize an online discussion group in winter term.

Called the Extractivism and Transition Research Online Dialogues (ETROD), we will invite an academic every month to discuss one of her/his published paper with the group. The roughly 90 minute session will be a format to particularly render concepts more precise and to critically engage with theories related to energy consumption, resource extraction, their environmental consequences and transformation processes.

We invite everyone willing to join the discussion – based on reading a text of the ‘speaker’, which will be send to you – to sign up via email to katja.mueller@zirs.uni-halle.de for one or multiple sessions.

Organisers Katja Müller (MLU Halle), Asta Vonderau (MLU Halle), Andreas Streinzer (Goethe Uni Frankfurt), Siarhei Liubimau (EHU Vilnius), Felix Ringel (Durham Uni)
In cooperation with ZIRS (Centre for Interdisciplinary Regional Studies), CityIndustries, DGSKA Europa, dgv Ethnographies of the Political
